Providing funding assistance for protecting
Raleigh's streams

Green Roofs cover a conventional roof with plants and soil to capture rainfall and reduce pollution.

1

Cisterns collect rainwater that can be used for watering landscapes and washing cars.

2

Disconnecting Downspouts route water that flows from your roof to your yard, which allows the soil to absorb and clean the water.

3

Permeable Pavement and Pavers can be used in place of conventional pavement to allow rainfall to absorb into the soil.

4

Rain Gardens can be part of a yard's landscaping, using plants and soil to remove pollution from stormwater and allowing water to soak into the ground.

5

Contact Stormwater staff at 919-996-3940 or RaleighStormwater@raleighnc.gov to discuss project ideas and learn more about the approval process! All property owners that pay a Raleigh stormwater fee are eligible.

Projects on properties within the City of Raleigh can receive 75-90% reimbursement through this program after projects are approved.

What is the Stormwater Quality Cost Share Program?

This program offers funding to homeowners who would like to install a stormwater quality device on their property. These devices capture and clean rainwater by mimicking nature, rather than sending the rain to storm drains. By installing a device, you can help reduce the amount of rain and pollution that goes into storm drains and ultimately into Raleigh's streams while making an investment in the environment and your home!
